Journey 300

300 LUMEN HYBRID SOLAR
FLASHLIGHT & CHARGER

Read instructions prior to use. Refer to the instructions regarding any questions about the use of your Journey 300 Flashlight.

USING YOUR Journey 300 Flashlight

Operating Your Light

The On/Off button operates the different lighting modes.

- 1st click: Low LED light (80 lumens, 50 hours of light)
- 2nd click: High LED light (300 lumens, 5 hours of light)
- Hold for 2 seconds to enable strobe lighting

Charging Your Light

When the light is charging, by either solar or USB, the charging indicator will show a red light. The indicator will shine brighter with a stronger charge and will turn green when a full charge is achieved. The charging indicator will not display green when charging from a light source. After initially removing the product from its packaging, charge it fully with direct power via Micro USB before using the solar charger. Leaving your flashlight charging for extended periods of time will not harm the rechargeable cell.

There are three ways to charge your light:

1. Micro USB port: Unscrew the end cap by rotating it counter clockwise. Insert the micro USB cable, insert other end into any standard USB charger or suitable USB wall outlet. Typically 4 hours of charge time is needed to fully charge the light from a standard wall outlet if flashlight is completely drained. The charging indicator will show green when the light is fully charged.
2. Solar panel charge: Position solar panel into the brightest sunlight or other lighting possible, with direct light on as much of the panel as possible. Typically charges full in 13 hours of time, depending upon brightness and intensity of light source. The charging indicator will not display green when the light is fully charged by the solar panel.

How to Charge Your Mobile Device or Tablet

Unscrew the end cap by rotating it counter clockwise. Insert the larger end of the USB cable into the larger of the two ports. Insert the other end of the cable into compatible mobile device. This product will not charge a device when the flashlight battery is lower than 20%, in order to reserve power for the flashlight.

PRODUCT WARNINGS

Do not use if broken, bent, cracked or damaged parts are present. Any light that appears damaged in any way or operates abnormally must be removed from service. Inspect before each use.

- Do not disassemble the flashlight. The LED cannot be replaced.
- Do not operate flashlight near fire, flammable liquids or in gaseous or explosive atmospheres.
- Do not permit children to use flashlight unsupervised.
- Do not shine directly into eyes.
- Unplug unit before attempting any cleaning or maintenance.
- This device is waterproof, but not intended for underwater use or extended submersion. Ensure both the top and the bottom ends of the flashlight are tightened before introducing to water.

WARRANTY INFORMATION

Our products are warranted against all defects in material and workmanship, excludes abuse, misuse, modification or accidents. Before returning any product, a customer service representative must issue you a Return Merchandise Authorization number. Obtain a Return Merchandise Authorization number by calling customer support at **435-674-4700**. Include the original receipt received with the merchandise and send the package to:
