### **ABOUT THE BLUE CAN 50 YEAR SHELF LIFE**

---

Blue Can offers a 50 year shelf life guarantee for its pure water products based on state-of-the-art manufacturing processes that exceed standard FDA regulations and bottled water industry standards.

FDA has established specific regulations for bottled water in Title 21 of the Code of Federal Regulations (21 CFR)...

<https://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfcfr/cfrsearch.cfm?cfrpart=129&showfr=1>

The International Bottled Water Association (IBWA) further adds:

The U.S. Food and Drug Administration, which regulates the quality and safety of bottled water, has neither set nor suggested any limitation to the shelf life of bottled water. In that regard, the International Bottled Water Association's general position is that as long as water is packaged in accordance with FDA processing and good manufacturing practices, 21 CFR, Part 129, and meets the FDA quality standard provisions as outlined in 21 CFR, Part 165, the product's shelf life should remain intact for an indefinite period provided that product storage is as recommended by the manufacturer.

Blue Can filters and purifies our canned water to less than one part per million of dissolved solids. During the canning process, each can of water is "patent pending" pressurized, removing all oxygen before hermetically sealing for long-term storage. This gives Blue Can products the unique advantage of protection from UV light and all other possible contaminants, making the expiration of the pure water inside a Blue Can proportional to the shelf life of the aluminum container itself. Unlike tin and steel, aluminum cans do not rust. Therefore, Blue Can offers a 50 Year Shelf Life for its pure water products based on state-of-the-art manufacturing processes that exceed standard FDA regulations and bottled water industry standards.
